Inspec Accession Number: 6514302

Abstract:

We proposed the post-processing method to reduce the blocking **artifact** in l coded JPEG images, which is based on minimum block-boundary-discontinuity. We analyzed the statistical property of block boundary pixel **difference**, class blocks into one of two types using OSLD (overlapped sub-laplacian distribution) compensated the **quantization** error depending on the type of block, adaptive postprocessing method can provide better visual quality as well as PSNR than method.
